FuseIQ v3.0 — Press Kit

Abbasi Global LLC | Florida, USA

Company Boilerplate

Short Version (50 words) FuseIQ is the operating system for AI-native teams. The platform enables organizations to build, orchestrate, monitor, and scale AI agent workflows through a unified visual interface. Founded in 2024 and headquartered in Florida, USA, FuseIQ serves developers, startups, and enterprise teams worldwide.

Standard Version (100 words) FuseIQ is the operating system for AI-native teams, providing a unified platform to build, orchestrate, monitor, and scale AI agent workflows at enterprise scale. Founded by serial entrepreneur Awais Abbasi and headquartered in Florida, USA, FuseIQ combines a visual no-code builder with professional-code extensibility, multi-model orchestration across GPT-4, Claude, Gemini, and open-source models, and enterprise-grade security including SSO, RBAC, and audit logging. The company is currently in Phase 2 of development with 250+ beta users and enterprise pilots in negotiation. FuseIQ is backed by a world-class engineering team and is raising a $500K seed round.

Extended Version (200 words) FuseIQ is building the operating system for AI-native teams — a comprehensive platform that transforms how organizations deploy, manage, and optimize artificial intelligence agents at scale. Headquartered in Florida, USA, and founded by serial entrepreneur Awais Abbasi, FuseIQ addresses the critical gap in the AI tooling landscape: the absence of a unified command center for multi-agent operations.

The platform features a visual drag-and-drop workflow builder that scales from no-code prototyping to full-code production deployments, multi-model orchestration supporting GPT-4, Claude, Gemini, Llama, and Mistral through a single unified interface, and real-time monitoring dashboards for cost tracking, latency analysis, and quality scoring. Enterprise customers benefit from built-in SSO, role-based access control, comprehensive audit logging, and optional on-premise deployment.

FuseIQ is currently in Phase 2 of its product roadmap, serving 250+ beta users with active enterprise pilot negotiations. The company operates as Abbasi Global LLC and is raising a

$500,000 seed round to accelerate product development and go-to-market execution. FuseIQ's open-core approach fosters community contribution while delivering the security and reliability demanded by regulated industries.

Founder Bio

Awais Abbasi — CEO & Founder

Awais Abbasi is a serial entrepreneur and technology executive with over a decade of experience building and scaling fintech and SaaS companies. As the founder of Abbasi Global LLC and creator of FuseIQ, Awais brings deep expertise in AI/ML product strategy, enterprise sales, and operational execution.

Career Highlights: - Founded and exited multiple technology ventures in fintech and SaaS - 10+ years of hands-on experience in software engineering, product management, and business development - Proven track record of taking products from concept to revenue-generating businesses - Deep network in the enterprise SaaS and AI/ML ecosystems - Expertise in regulated industries and compliance requirements

Education & Background: - Based in Florida, USA - Active contributor to the AI and open-source communities - Regular speaker at technology conferences and startup events

Personal: Awais is driven by a vision of democratizing AI operations for teams of all sizes. When not building FuseIQ, he mentors early-stage founders and contributes to AI safety and ethics discussions.

Key Statistics & Metrics

Company Metrics

Metric	Value
Founded	2024
Headquarters	Florida, USA
Legal Entity	Abbasi Global LLC
Current Phase	Phase 2: Active Development
Beta Users	250+
Waitlist	800+
Active Workflows Executed	1,200+
GitHub Stars	180+
NPS Score	72
Enterprise Pilots	3 in negotiation
Team Size	4 (founding team)

Product Metrics

Metric	Value
Supported Models	GPT-4, Claude, Gemini, Llama, Mistral
Average Session Duration	12 minutes
Weekly User Growth	15%
Discord Community	400+ members
Newsletter Subscribers	1,200
Newsletter Open Rate	45%

Market Metrics

Metric	Value
TAM (AI Operations)	$50B by 2028
SAM (AI Orchestration)	$8B by 2028
Target Year 1 ARR	$2.4M
Seed Round Target	$500,000
Valuation Cap	$3M

Product Screenshots — Descriptions

1. Visual Workflow Builder

A modern, dark-themed canvas interface showing a multi-agent workflow with connected nodes representing different AI models and processing steps. Features include drag-and-drop functionality, real-time execution preview, and zoom controls. The interface uses the

FuseIQ cyber-luxury glassmorphism design system with neon cyan (#00D4FF) and aurora (#B829DD) accents.

2. Monitoring Dashboard

A comprehensive analytics dashboard displaying real-time cost tracking across multiple AI models, latency histograms, quality score trends, and execution success rates. Includes filtering by date range, team, and workflow type. Dark theme with data visualization in brand colors.

3. Agent Marketplace

A grid layout showcasing pre-built AI agent templates for common use cases: sales outreach, customer support, research synthesis, code review, and data analysis. Each card shows ratings, usage statistics, and one-click deploy buttons.

4. Team Collaboration View

A shared workspace interface showing multiple team members' workflows, version history, commenting threads, and approval workflows. Includes role-based access indicators and activity feeds.

5. Model Configuration Panel

A detailed settings interface for configuring AI model parameters including temperature, max tokens, system prompts, and fallback chains. Supports saving configurations as reusable templates.

6. Security & Compliance Dashboard

Enterprise admin view showing SSO configuration, audit log timeline, data residency settings, and compliance status indicators (SOC 2, GDPR, HIPAA readiness).

Brand Assets

Logo

- **Primary**: Full logo with icon + wordmark on dark background
- **Secondary**: Icon-only mark for app icons and favicons
- **Light variant**: For use on light backgrounds
- **Formats**: SVG, PNG (1x, 2x, 3x), PDF
- **Clearspace**: Minimum 20px padding around logo

Color Palette

Color	Hex	Usage
Void (Background)	#06070A	Primary dark background
Primary	#00D4FF	CTAs, links, highlights
Aurora	#B829DD	Gradients, accents
Signal	#00E5A0	Success states, positive metrics
Ember	#FF6B35	Warnings, alerts
Surface	#0A0E1A	Cards, panels
Glass	rgba(10,14,26,0.6)	Glassmorphism overlays

Typography

- **Headlines**: Inter or SF Pro Display, weight 700
- **Body**: Inter, weight 400-500
- **Monospace**: JetBrains Mono for code and data

Photography Style

- Dark, moody tech aesthetic
- Neon lighting accents (cyan, purple)

- Abstract digital patterns and network visualizations
- Diverse team photography in modern office settings

Voice & Tone

- Sharp, confident, technically precise
- No corporate buzzwords or filler
- Action-oriented language
- “We build, you scale”

Press Coverage & Mentions

No press coverage yet — this section will be updated post-launch.

For Journalists

We are available for: - Product demos and walkthroughs - Founder interviews - Expert commentary on AI operations trends - Exclusive launch announcements
